Week 4 Readings/Resources

In this last week of the course it's time to take the conversation from just focusing on what to do into looking at how to make migration easier. While there are many things that can help with migration tasks, automation of tasks and partner solutions are two areas that can quickly provide a lot of assistance.

Make Migration Easier

Tools like the [AWS Command Line Interface,](#) [AWS Systems Manager](#), and [AWS CloudFormation](#) all provide methods for you to automate actions being taken will not losing control over what you are doing. These enable the ability to make API calls to AWS in order to launch, configure, and manage services as well as giving access for control and management tasks within your servers' systems. Here are additional resources that you might want checkout:

- [Working with SSM Agent](#)
- [AWS CloudFormation Templates](#)

Additional Migration Resources

AWS provides many tools to give you more of a hands-off approach to your migration tasks. Whether handling assessment, planning, or full application migration, there are several tools within AWS to utilize.

- [Migrate to AWS with Confidence](#)
- [TSO Logic](#)
- [CloudEndure](#)

Migration Delivery Partners

[Migration Delivery Partners](#) help customers through every stage of migration, accelerating results by providing personnel, tools, and education in the form of professional services. These partners either are, or have a relationship with, an AWS audited Managed Service Provider to help customers with ongoing support of AWS workloads.
